Lab 1a: Skull and Teeth

Objectives: Review the basic anatomy/osteology of the human skull and dentition.

In the laboratory:

1. Be able to identify (and name) all the bones of the skull using both articulated and disarticulated study specimens.
2. Identify the special features covered both Byers’ texts.
3. Complete Worksheet Exercises 1.1, 1.2 and 2.1 A-E, & 2.5 in Byers (2011b)

You may either detach the pages from your copy of the lab text or make photocopies of these if you do not want to tear out pages.

Due Date: September 12, 2013 at 9 AM.
